## Bowel Incontinence

Also called: Encopresis, Fecal incontinence, Stool soiling

Bowel incontinence is the inability to control your bowels. When you feel the urge to have a bowel movement [<https://medlineplus.gov/bowelmovement.html>] , you may not be able to hold it until you get to a toilet. Millions of Americans have this problem. It affects people of all ages - children and adults. It is more common in women and older adults. It is not a normal part of aging.

Causes include:

- Constipation [<https://medlineplus.gov/constipation.html>]
- Damage to muscles or nerves of the anus and rectum
- Diarrhea [<https://medlineplus.gov/diarrhea.html>]
- Pelvic floor disorders [<https://medlineplus.gov/pelvicfloordisorders.html>]

Treatments include changes in diet, medicines, bowel training, or surgery.
