## Premature Babies

Also called: Preemies

Almost 1 of every 10 infants born in the United States are premature, or preemies. A premature birth [<https://medlineplus.gov/pretermabor.html>] is when a baby is born before 37 completed weeks of pregnancy. A full-term pregnancy is 40 weeks.

Important growth and development happen throughout pregnancy - especially in the final months and weeks. Because they are born too early, preemies weigh much less [<https://medlineplus.gov/birthweight.html>] than full-term babies. They may have health problems because their organs did not have enough time to develop. Problems that a baby born too early may have include:

- Breathing problems [<https://medlineplus.gov/breathingproblems.html>]
- Feeding difficulties
- Cerebral palsy [<https://medlineplus.gov/cerebralpalsy.html>]
- Developmental delay [<https://medlineplus.gov/childdevelopment.html>]
- Vision problems [<https://medlineplus.gov/visionimpairmentandblindness.html>]
- Hearing problems [<https://medlineplus.gov/hearingproblemsinchildren.html>]

Preemies need special medical care in a neonatal intensive care unit, or NICU. They stay there until their organ systems can work on their own.
