

Denture Care and Maintenance

Key Points

- Placing a denture in water (or a denture cleanser solution) when it is not being worn helps the denture retain its shape, remain pliable and keeps it from drying out.
- Dentures should never be placed in hot or boiling water, which could cause them to warp.
- Denture adhesives are not a remedy for ill-fitting dentures, which may need to be relined or replaced to prevent oral sores from developing.
- A company earns the [ADA Seal of Acceptance](#) by submitting scientific evidence that demonstrates the safety and efficacy of its product, which the ADA Council on Scientific Affairs evaluates according to objective requirements.
